Recruitment Team
Wizard Group of Companies
Vancouver, BC, Canada

Dear Sir/Madam,

I am applying for the infosec/cybersecurity research intern role with Wizard Group of Companies which I found on Indeed.

I am a fourth year undergraduate student in computer science and I will be completing my degree in the coming months. I am motivated and passionate about entering the cybersecurity industry with my sights set on a blue team role. I believe this will be an ideal fit for me. Throughout my degree and past profession, I have found my strengths in investigative and analytical work, finding patterns and anomalies in complex systems. I am diligent, detail-oriented and highly focussed with a keen determination to constantly learn.

Technically, I bring a strong foundation in computer science, more specifically in computer systems, operating systems, networking, security, cryptography, algorithms, AI, UNIX, web servers, and much more. I am skilled at programming and scripting with several programming languages and I am quite familiar with the CLI and Linux. Beyond my academic studies, I work hard to build more practical skills through projects, OSINT, home labs, applied courses (like Splunk courses), and capture the flags. My final project involves creating a dashboard using Django/python for OSINT data retrieved from Internet-connected devices globally (with ZoomEye).

I have very strong verbal and written communication skills with a logical and technical approach to my writing. The first writing course I ever took in university was a logic-based writing course which was foundational to my writing style. I have consistently practised my writing skills through university electives in communications courses and various science courses.

Thank you for your time and consideration, I look forward to talking further.

Kind Regards,

Stephanie Petrone
